

BigchainDB: A Scalable Blockchain Database

Trent McConaghy

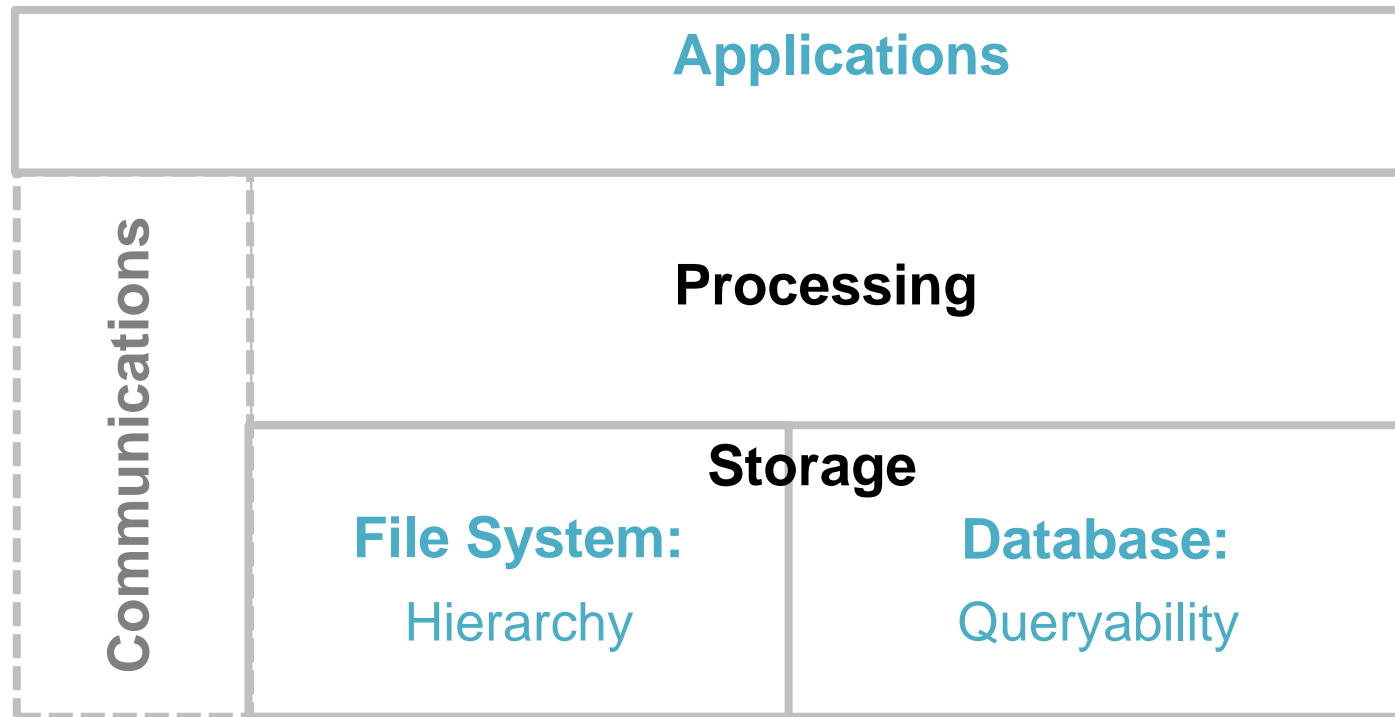

BIGCHAIN^{DB}

ascribe[®]

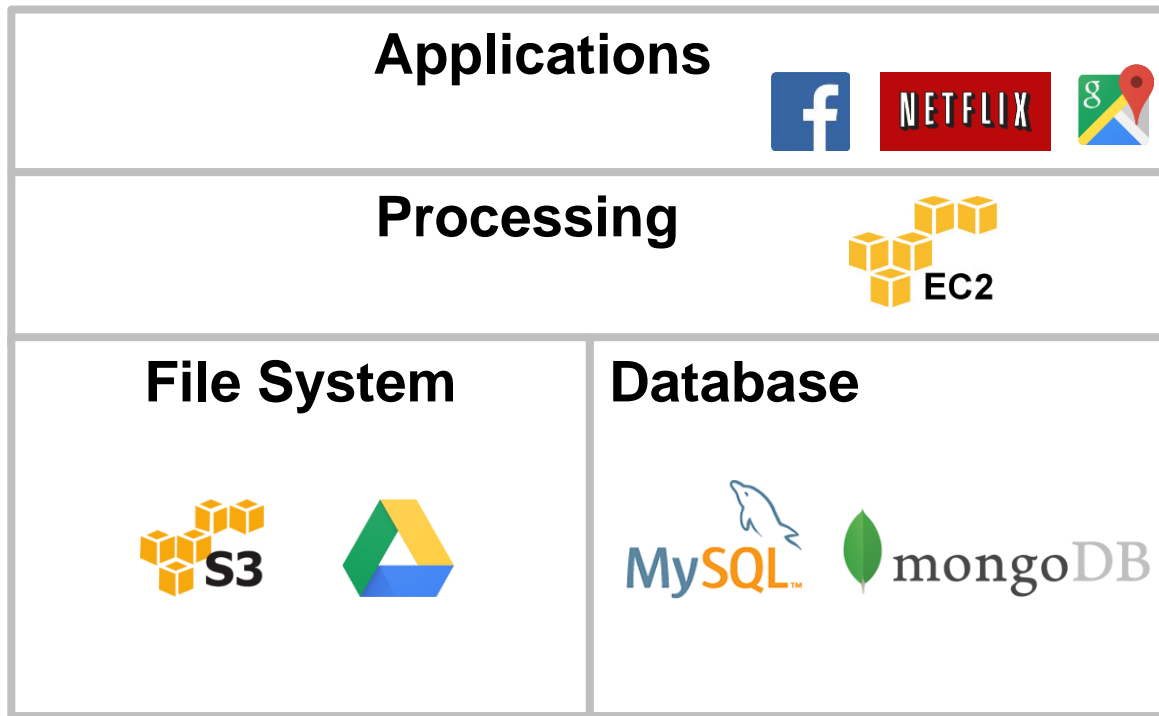

The Elements of Computing

Modern Application Stacks

The modern cloud application stack

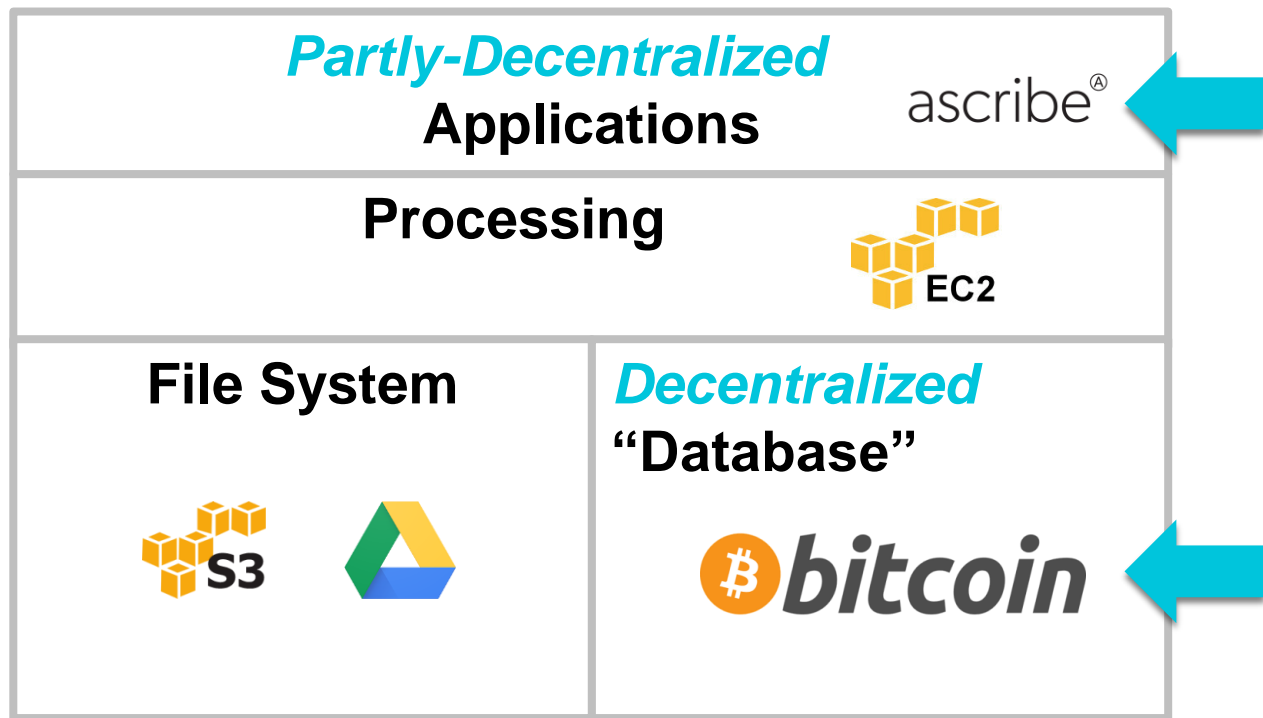

Along came Bitcoin...

“Magic Internet Money”

Bitcoin sparked a revolution

Truly own digital assets, supply chain visibility,

1.5 tx/s
50GB

What about **planetary** scale?

Planetary scale:
Netflix uses 37% of
Internet bandwidth

“Big data” Distributed DBs

Writes / s vs. # nodes

Planetary scale:
Netflix uses 37% of
Internet bandwidth

To be Distributed, Big Data DBs Must Solve Consensus

Byzantine Consensus
(1982)

Paxos (1990/1998)

Two ways to scale up

Big data-fy the blockchain

- Builds on man-decades of work
- Big scalability challenges

<or>

Blockchain-ify big data

- Builds on man-centuries (millennia?) of work
- Scalability challenges solved
- But, what does “blockchain-ify” mean?

“Blockchain-ify”

Decentralization: no single entity owns or controls

Immutability: tamper-resistant

Assets: Can issue & transfer assets

Blockchain (noun): hashed-together chain of blocks (1991!)

Blockchain (noun): storage that is decentralized + immutable + assets

Blockchain (*adj*): decentralized + immutable + assets

How to Blockchain-ify Big Data

Retain Big Data DB's Performance

- Let the Paxos derivative *solve order*. Get out of its way!
- It naturally builds a log of *all* txs

Add in blockchain characteristics

- **Decentralization:** federation voting on txs. Group into blocks for speed.
- **Immutability:** hash on prev. blocks
- **Assets:** Digital signatures etc.

Benchmarks

Writes / s vs. # nodes

This is BIGCHAIN^{DB}

Throughput

>1,000,000
writes/s

Latency

<100 ms

Capacity

Petabytes with
each node adding
48TB

Scalability

Performance
increases as nodes
are added

Query

Database is fully
queryable

Traditional
blockchains

Big Data

BIGCHAINDB

Immutability

Decentralized control

Assets

High Throughput

Low Latency

High Capacity

Rich Permissioning

Query Capabilities

A Decentralized DB for the Planetary-Scale Cloud

Bonus: A DB for the Emerging Planetary-Scale *Decentralized* Cloud

BigchainDB: A Scalable Blockchain Database For the Planet (& Wrigley)
